Folding car pedestals 2pcs

Instructions for use

Translation of the original instructions

Please read these instructions thoroughly before first use. Familiarizing yourself with all instructions necessary for safe use and operation and understanding all risks that may arise during the operation of the equipment shall be the responsibility of the user.

PRODUCT DESCRIPTION

The support is designed for work where heavy loads need to be supported. It is forbidden moving supported loads. The product has been designed for domestic use only and cannot be used professionally, i.e. in businesses and for business. Proper, reliable and safe operation of the equipment depends on proper use, therefore: please read the entire manual and keep it before working with the equipment. The supplier is not liable for any damage or injury caused by using the equipment in a manner contrary its intended use, or by failing to comply with the safety regulations and recommendations contained in this manual. Using equipment contrary to its intended use also leads to the loss of the user's warranty and guarantee rights.

SAFETY RECOMMENDATIONS

A prop is a device that operates under high loads. Basic safety rules must be observed when working. Before starting work, read the instructions for use and keep them. Never exceed the maximum load capacity of the support. Do not leave the lifted load unattended. It is forbidden to have children and untrained operators near the work site or equipment storage area. Do not wear loose clothing, or jewelry. Long hair should be pinned up. Wear personal protective equipment. The support must be placed on a level, flat, hard and stable base. The support should be placed under the object being lifted so that the load is supported in the middle of the saddle. Keep the equipment away from sources of heat and fire as this could damage the equipment or impair its operation. Before lifting any load, make sure that the support will not shift once the load is placed on the saddle of the support. Before placing any load on the support, make sure that the support is not damaged in any way. If the support requires repair, contact an authorised service centre. Be foresighted, do not work if you are tired or under the influence of medication.

OPERATION AND MAINTENANCE

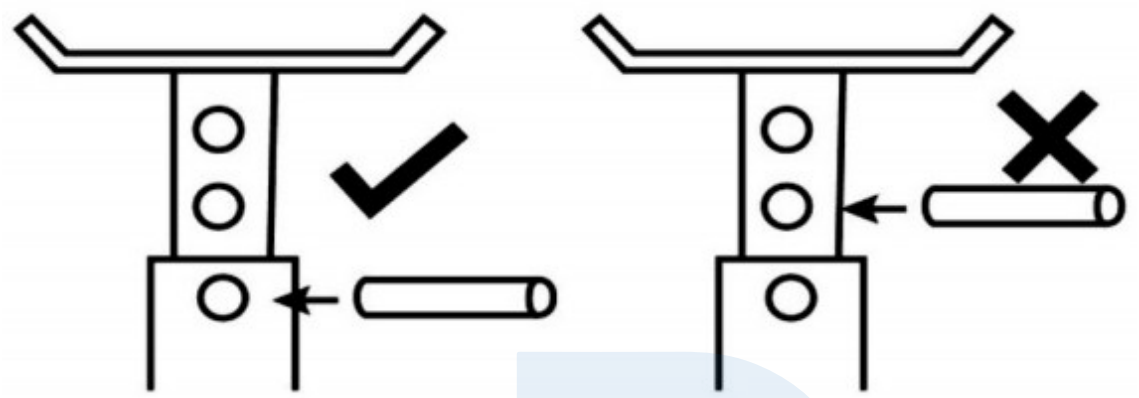

Before placing the load on the support, make sure that the person operating the equipment will have the support and the supported load in sight while performing all activities related to the operation of the equipment. Position the support so that it is stable. Lock all 3 legs by placing the ring in the lowest position. Adjust to the desired height. Then secure the support arm by pushing the pin through and locking it with the cotter pin. Position the support under the lifted load in a location that is designed for the use of jacks (e.g. on cars) so that the load rests centrally on the support saddle. Slowly and carefully lower the load onto the support. Before placing the load on the support, ensure that the operator has the support and the supported load in sight while performing all activities related to the operation of the equipment. Insert the arm into the base. After mounting the arm into the base, bend the protrusion.

MAINTENANCE

When the support is not in use, store it with the arm set in the lowest position. Keep the support clean. It is forbidden to use any modifications to the design of the support.

TECHNICAL DATA

Model	JS2S	JS3S
Load capacity (kg)	2000	3000
Minimum height (mm)	275	280
Maximum height (mm)	365	415
