Pro-Tech TOOLS

Ramps 2pcs

Instructions for use

1. Purpose of the device

The ramp is a universal tool designed for lifting passenger cars with a maximum load capacity of 2 tonnes (1 tonne per ramp). A high safety threshold protects the vehicle from tipping over, while special grooves increase tyre grip. The unique design allows for easy storage.

Instructions for use:

1. **Preparation:**

Make sure the vehicle is on a level and firm surface. Check that the ramps are undamaged and clean.
Make that the width of your vehicle's tyres does not exceed the width of the ramp (30 cm).

2. **Placement of ramps:**

Place the ramps in front of the front or rear wheels of the vehicle, depending on which part of the vehicle you need to lift. Ramps must be aligned with the wheels and firmly laid on the surface.

3. **:**

Slowly and carefully drive the vehicle onto the ramps until the wheels are fully on top of the ramp and against the safety threshold.
Avoid sudden movements to prevent the ramp from tipping over or shifting.

4. **Vehicle security:**

After stopping on ramps, apply the handbrake and switch off the engine.
For additional safety, place chocks behind the wheels that remain on the to prevent unwanted movement of the vehicle.

5. **Work under the vehicle:**

Before getting under the vehicle, make sure it is stable on the ramps and not in danger of moving.
Never exceed the maximum load capacity of the ramps (3 tonnes for a pair, 1.5 tonnes for a single ramp).

6. **Descending the ramps:**

When the work is finished, remove all tools and objects from under the vehicle.
Slowly and carefully get off the ramps, avoiding sudden movements.

Safety :

Check the condition of the ramps before each use. Do not use damaged or weakened ramps. Ensure that the surface on which the ramps are placed is firm, dry and level.
Never exceed the maximum load capacity of the ramps.
Always use additional security such as supports or stands when working under the vehicle. Make sure that unauthorised persons, especially children, are not in the vicinity when using the ramps.
After use, store the ramps in a dry place, protected from the , to prolong their life.

Following these guidelines will ensure safe and efficient use of the .
